

(Phases of EMDR for info for developers)

Phase 1. Repeating the bilateral stimulation until SUDS are 0 or 1 /10

Phase 2. Positive belief installation until positive beliefs are at 6 or 7 out of 7

Phase 3. Body scan)

Phase 1 of EMDR:

- **AI Voice guidance** then reading the road map summary and saying "When you are ready..." then and when ready client starts the bilateral stimulation
- **Post-set check-ins** ("Is it changing and still connected? (in my voice see files)") If changing another set will start automatically saying (Ok good, go with that or go with where you left off). If not changing then different voice message (ok, lets go back to the original image. Without any tapping or eye movement, just take a moment to notice what you see and feel. Rate your negative emotion.) Pop up with SUDS rating here – if over 1/10 then new audio. If 1 or 0 out of 10 move to phase 2 of emdr. Audio for continuing: Ok lets continue with what you noticed about your original image.
- **Sets can last for 1.5 hours in total – client can choose between 1 hour and 1.5 hours.**
- End with Calm place exercise – i.e. the pincode. Text to ask client to bring up their pincode and spend a minute finding that nice feeling in the body.
- **Advice to client to wait 4 days to a week before the next session as the processing continues**
